

PRESS RELEASE

TOTM Technologies and Indonesian law enforcement agency partnership cemented with second contract win worth US\$5.4 million

- To provide biometric identification systems integrated with the National ID database to augment law enforcement capability, boost agency-wide efficiency and increase public safety in general
- The project is expected to be completed in 2022
- Actively engaging other government agencies embarking on digital transformation to ensure effective public service and governance

SINGAPORE, 19 October 2022 – TOTM Technologies Limited (“**TOTM Technologies**” or the “**Company**” and, together with its subsidiaries, the “**Group**”) is pleased to announce that the Group has secured a project with an aggregate value of US\$5.4 million (equivalent to S\$7.6 million¹) to supply biometric identification systems integrated with the National ID database to one of the law enforcement agencies in Indonesia.

The project involves the provision of a strategic digital data identification system which will be integrated with the National ID database to increase the efficiency for law enforcement purpose. This solution empowers the agency to significantly improve the identification speed and accuracy leveraging the technology and foundational biometric National ID of the country. For this purpose, the Group will source and procure the required hardware and software and integrate the subsystems into a comprehensive solution for the end customer. The project is expected to be completed by the end of 2022 and will contribute positively to the Group’s FY2023 performance.

Mr Pierre Prunier, CEO and Executive Director of TOTM Technologies, said, “**Building upon our proven track record of the continued roll-out and successful deployment of Indonesia’s National ID, this contract win highlights our expertise and experience as a leading digital identity enabler and systems integrator with deployment expertise in the public safety space.**”

TOTM Technologies intends to continue to innovate and disrupt with multi-modal biometric software as we reimagine what we can deliver to customers; as both a leading digital identity technology company and essential ecosystem builder and partner bridging the public-private divide.”

The Ministry of National Development Planning of Indonesia has identified digital transformation as a key pillar that the government must focus on in 2021 to ensure effective public service and governance². Identity management solutions tapping on the National ID database will be able to vastly improve efficiency and productivity, reduce redundancies and reform public service delivery so that government e-services can be assessed by citizens

safely, anytime and anywhere. This is especially so as Indonesians have one of the highest mobile penetration rates in the Asia-Pacific region³.

This augurs well for the Group as it has a proven track record in the deployment and maintenance of the biometric National ID system in Indonesia, which currently has over 200 million of enrolled citizens.

“With foundational infrastructure like the National ID database already in place, it will be easier and expeditious to roll out functional applications with identity management biometric technology solutions to be deployed for other government agencies as well as the private sector. There are a wide a range of use cases – such as offline verification for border management, authentication for healthcare services etc. that are very much needed. We’ve taken a ground-up approach to be able to give enterprise customers a fully automated verification system with the ability to support government services without expensive and dedicated on-premises infrastructure,” added Mr Prunier.
